Email: wenboz4@uw.edu

EDUCATION

University of Washington, Seattle, WA 2019 - 2021 (Expected)
M.S. in Biostatistics, GPA: 3.82

Xian Jiaotong-Liverpool University (XJTLU), Suzhou, China 2015 - 2019
B.S. with honours in Applied Mathematics (First Class), GPA: 3.82 (WES Evaluation)

Liverpool University, Liverpool, UK (Dual Degree)
B.S. with honours in Applied Mathematics (First Class)

RESEARCH EXPERIENCE

Department of Biostatistics, University of Washington June 2020 - Present
Supervisor: Dr. Eardi Lila

- Analyzed mesh data and calculated the template of brain surfaces by using procrustes analysis
- Developed a functional penalized regression method over two-dimensional manifolds with a smooth surface penalty; discretized the brain surface with finite element analysis and solved the sparse equation in the regression setting
- Generalized this surface penalty to functional linear discriminant analysis within the optimal scoring framework; proposed an iterative optimization algorithm to solve this problem

Fred Hutchinson Cancer Research Center Feb 2020 - Dec 2020
Supervisor: Prof. Peter Gilbert

- Collaborated with bio-statisticians to update statistics analysis plan; analyzed antibody markers and demographic data to investigate associations
- Implemented superlearner regression, an ensemble model, for calculating the estimated optimal surrogate by using R package Superlearner; sped up the modeling computation with the parallel computing on the Linux clusters
- Designed the simulation study to verify a non-parametric model which was based on targeted maximum likelihood estimation framework to estimate immune response threshold of risk

Department of Biostatistics, University of Washington Oct 2019 - Present
Supervisor: Profs. KC Gary Chan, David Haynor and Dean Shibata

- Used orthogonal non-negative matrix factorization to obtain spatial components of the brains
- Evaluated the contribution of each component to the disease with non-negative least squares
- Computed the partial correlations between different components using a Gaussian copula graphical model; discovered the potential patterns in different groups
- Extended this framework for longitudinal measurements; helped radiologists compare the disease group and the control group by their long-term patterns

Department of Mathematical Sciences, XJTLU

Apr 2018 - Sep 2018

Supervisor: Prof. Fei Ma

- Processed and cleaned the image data; Developed a deep convolutional encoder-decoder architecture based on U-Net to segment overlapped chromosomes;
- Proposed a Convolutional Neural Network (CNN) model to classify each pair of chromosomes and automatically generated Karyotype images

HONORS and AWARDS

UW Summer Institutes Scholarship , University of Washington	2019
University Academic Achievement Award (scholarship) (Top 10%) , XJTLU	2018
First Prize in Mathematical Modeling Contest (Top 5%) , XJTLU	2017

ACTIVITIES

Reading Group: The Elements of Statistical Learning	<i>Advisor:</i> Dr. Noah Simon, 2020
UW Summer Institutes in Statistics for Big Data and Statistics Genetics	2020

SKILLS

R, Python, Matlab, Java, Latex and Linux.
